innovation is fundamental part of our daily lives we are change agents in personal and professional contexts so while the term innovation would apply to the development and proliferation of high tech products it would also apply to incremental changes to existing products and services deployment of a new policy within an organization a government program designed to decrease poverty or even the change of some personal habit such as fitness and nutrition so what does it take for an innovation to be successful ralph waldo emerson suggested that if you build a better mousetrap the world will beat a path to your door meaning that if you make something better people will want it while there is a core of truth to this the idea does not seem to reflect what happens in reality why is it that some great products services policies and ideas never seem to catch on and some questionable ones seem to possess a certain momentum and hang around forever the goal of the book is to answer this question and to provide the reader with a solid resource to impact their environment in the overview chapter the five laws of innovation success are provided 1 there must be superior value 2 the stability of the existing alternative must be reduced 3 uncertainty fear of the new alternative must be reduced 4 outside independent influences exert an impact and 5 bias in search and choice must be overcome following the presentation of the five laws examples are given of large organizations that fell short because one or more were violated some of these include the new coke debacle bic marketing perfume levi s trying to market three piece suits ibm trying to introduce a new operating system in the 90s and the questionable success of the deregulation of electricity markets in north america the next five chapters detail each of the different laws and provide an organizing framework the comprehensive change model this model offers additional structure to an individual trying to maximize the impact of a change initiative the information is explicit and itemizes the factors that have an impact on each particular component the value offering stability uncertainty independent influences as well as bias in search and choice examples throughout the chapters provide concrete application of the concepts in the following six chapters that comprise the second part of the book the laws and the comprehensive change model are applied to a broad range of contexts including 1 becoming a vegan 2 blood donation 3 buying a personal taser 4 consideration of geothermal heat pumps 5 adoption of nurse practitioner clinics and 5 the government policy regarding adoption of metric in the united states the only major country in the world not to have formally switched over the goal of these cases is to demonstrate two things repeatedly the first is that innovation takes many different forms changes to products services policies ideas and so on the professional and the personal internal to the organization and external to the organization the complex and the commonplace the second thing that the cases demonstrate is that no matter what type of change initiative one is talking about all five laws of innovation success are critical to the outcome falling short on just one may lead to some level of ineffectiveness

in recent years market definition has come under attack as an analytical tool of competition law scholars have increasingly questioned its usefulness and feasibility

that criticism comes into sharper relief in dynamic innovation driven markets which do not correspond to the static markets on which the concept of the relevant market was modelled this book explores that controversy from a comparative legal perspective taking into account both eu competition and us antitrust law it examines the manifold ways in which courts and competition authorities in the eu and us have factored innovation related considerations into market delineation covering innovative product markets product differentiation future markets issues going beyond market definition proper such as innovation competition innovation markets and potential competition intellectual property rights innovative aftermarkets and multi sided platforms this book finds that going forward the role of market definition in dynamic contexts needs to focus on its function of market characterisation rather than on the assessment of market power

this book develops the theme of my earlier innovation the creative impulse in human progress and considerably expands the latter book i came to the study of innovation from experience in industry which had brought me into close practical contact with it and my initial interest in the subject was in terms of the way in which it expressed human creativity progressively however my focus shifted towards the laws which help or hinder creativeness in being economically fruitful this led to the writing of the political economy of innovation and the editing of direct protection of innovation in the latter work i had the opportunity of arguing the case for specific new law to complement the patent system and of having that case criticised by experts just as the first book set economic innovation in a wider context of creativity the present one sets the law that makes it possible in a wider context of property rights this is because my study of intellectual property resulted in growing awareness of the incomparable past value and even greater future potential of these rights for innovation and prosperity my intellectual debt to douglass north is as great in this later stage as it was to joseph schumpeter in the earlier one and to christopher dawson by whom i had the good fortune to be taught in person in both
